Class 6 Biology: Ecosystems & Plants

This lesson plan covers the fundamentals of plant biology and ecosystems for Class 6 students. Below are the core topics we will be studying:

1) *Photosynthesis - The process by which plants make food using sunlight.*
2) *The water cycle - Evaporation, condensation, and precipitation.*
3) *Food chains - Understanding producers, consumers, and decomposers.*
4) *Cell structure - Identifying the nucleus, cytoplasm, and cell wall.*
5) *Pollination - How bees and wind help flowers reproduce.*
6) *Plant life cycle - From a tiny seed to a fully grown tree.*

Activity: Students will require visual flashcards and colouring worksheets for these topics to build better retention.
