Class 4 Geography: The Solar System

Introduction to our Solar System

Here are the main components we need to study:

1) The Sun - The star at the center of our solar system, providing light and heat.

2) Mercury and Venus - The innermost rocky planets.

3) Earth - Our home planet, known for liquid water and life.

4) Mars - The red planet with polar ice caps.

5) Gas Giants - Jupiter and Saturn, massive planets with rings and many moons.

6) Ice Giants - Uranus and Neptune, the furthest planets in the solar system.

7) Asteroid Belt - A region of space rock between Mars and Jupiter.
